## Solargorilla

Product Name: Solargorilla

Manufacturer: -

Model Number: TGS1064

In the desert, on safari, up a mountain or simply on the move, the solargorilla gives you power anywhere under the sun.

Solargorilla's 24 volt and 5 volt USB socket make it the ultimate renewable power station for your laptop, mobile phone, iPod and many more devices.

Solargorilla works via two PV (photovoltaic) solar panels, which generate electric current when they are exposed to light. The green LED on the Solargorilla indicates the strength of charge - the more UV intensity - the better it will work! The technically advanced solar panels ensure superb power and reliable performance, all housed in a tough outer casing.

Solargorilla is compatible with most laptops, mobile phones, iPods, PDAs, handhelds, games consoles and Sat Navs. You can even use the Solargorilla to recharge the fabulous Powergorilla as per the picture on the right (available separately here) - simply attach it using the 2m extension cable and the L52D tip. A total portable power station!

### Features

- \* tough, rubberised casing
- \* portable, fold-up design protects your solar panels when stored
- \* water resistant design
- \* slot to allow solargorilla to be suspended on vehicle or tent for outdoor use
- \* 20V power socket out and standard 5v USB socket
- \* green LED charging indicator
- \* dimensions: 264 x 200 x 19mm

### Kit includes

- \* 1 x Solargorilla
- \* 8 x male laptop connectors, 9 "monkey nuts" mobile phone connectors
- \* 1 x female USB charging tip for smart phones, PDAs and other USB powered devices

Please Note: Solargorilla is a charging option. It relies on the UV intensity of the sun. The Solargorilla has been trialled successfully in the Southern Hemisphere by aid agencies, emergency services, the military and adventure travellers, where power is a crucial element of their communications strategy. The David Shepherd Wildlife Foundation suffered communications problems in the past and the products have been hugely acclaimed as being a long overdue solution to power issues. Pre-production units have also been on field tests in Africa, Australia and even Afghanistan. The Solargorilla was extensively field-tested in South Africa earlier this year, where it powered a number of laptops for a week at a time.
