ROBORAPTOR™

Product Name: ROBORAPTOR™

Manufacturer: -

Model Number: Robo3

New Page 1

Dinosaurs are back and roaming the earth in the 32" long Roboraptor, an advanced fusion of technology and personality. With his advanced artificial intelligence personality, realistic biomorphic motions, direct control and autonomous (free-roam) modes, the Age of Dinosaurs has truly returned.

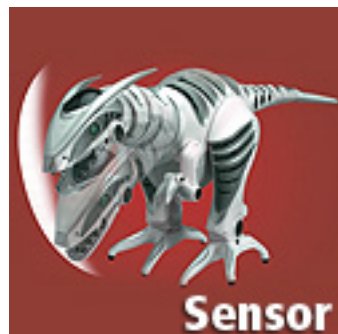

Developed by Mark Tilden, the former NASA scientist behind the Robosapien, Roboraptor is perhaps even more amazing than his humanoid counterpart.

ROBORAPTOR™

Roboraptor comes to life with the following features:

- Fluid bi-pedal motion: walking, running and predatory gaits
- Realistic body movements: turning head and neck; whipping tail actions
- Three distinct moods: hunter, cautious and playful
- Autonomous environmental interaction: responds with mood specific behaviors and sounds
- Mood dependent behavior: aggressive/hunting mood; nervous/cautious mood; friendly/playful mood
- Multi-sensory: touch sensors in his tail, chin and mouth; sonic sensors
- Infra-red vision system detects objects in his path, or approaching him
- Powerful jaws that play tug-of war games, "bite" and pull
- "Laser" tracking technology: trace a path on the ground and he'll follow it
- Visual and sonic guard mode
- Responds to commands from Robosapien V2
- Auto shut-off function
- Video game style controller
- Demonstration mode
- 40+ pre-programmed functions
