Retractable Screens

Product Name: Retractable Screens

Manufacturer: -

Model Number: WWw5

Quote on request Unlike other systems, this unit places minimal tension on the face, enabling a wide variety of both rigid as well as more flexible substrates to be used, without resulting in curling of the sides. One is therefore able to use anything from paper to vinyl to cloth, with a gloss or matt finish. Printed polysatins are particularly attractive. Also Available in DBL (Adverts is shown on both sides) When erected, 90% of the frame is hidden. This is important as an advertiser wants to display the advertisement and not the unit. The units come in a couple of popular widths, the standard width being 850mm. The next most popular size is 1,5m wide.
